Question: Find the coordinates of a point A where AB is a diameter of the circle with center (3, -1) and the point B is (2, 6).

| Point | Value | Description |
|-------|-----------|---------------------|
| C | $(3, -1)$ | Centre of the cicle |
| B | $(2, 6)$ | Given point B |
| A | (x, y) | Coordinates of A |

TABLE 0: Variables Used

Solution:

$$\mathbf{C} = \frac{\mathbf{A} + \mathbf{B}}{2} \quad (1)$$

$$= \frac{\begin{pmatrix} x \\ y \end{pmatrix} + \begin{pmatrix} 2 \\ 6 \end{pmatrix}}{2} \quad (2)$$

$$= \left(\frac{x+2}{2}, \frac{y+6}{2} \right) \quad (3)$$

Given the centre of the circle **C** is (3,-1),we can write

$$\left(\frac{x+2}{2}, \frac{y+6}{2} \right) = (3, -1) \quad (4)$$

By solving this two equations we get:

$$x = 4 \quad (5)$$

$$y = -8 \quad (6)$$

Therefore, the coordinates of point **A** are (4, -8).
